## **1 Introduction**

This document lists the main design parameters based on the official applicable standards. In addition, it lays out the main requirements for potential installation sites with respect to the structural stability of the wind energy converter.

The parameters and values listed in this document do not make any statements with respect to the general or site-specific power performance and/or noise emissions of the wind energy converter. This information is available in separate documentation.

## 2 Technical specifications of wind energy converter

Tab. 1: Tower versions

Type	Tower version
Tubular steel tower	E-175 EP5-ST-112-FB-C-01
Hybrid steel tower	E-175 EP5-HST-132-FB-C-01
Hybrid tower	E-175 EP5-HT-162-ES-C-01

Tab. 2: Technical specifications

Parameter	Value	Unit
Rotor diameter	175	m
Nominal active power	6000	kW
Cut-in wind speed	2.5	m/s
Nominal wind speed (simulated value, power-optimised operation)	12.5	m/s
Cut-out wind speed (10-minute mean) <sup>1</sup>	25	m/s
Minimum operating speed <sup>2</sup>		
■ E-175 EP5-ST-112-FB-C-01	4.6	rpm
■ E-175 EP5-HST-132-FB-C-01	3.9	rpm
■ E-175 EP5-HT-162-ES-C-01	4.6	rpm
Speed setpoint <sup>3</sup>	8.75	rpm
Design service life	25	Years

<sup>1</sup> With activated storm control.

<sup>2</sup> Rotational speed at which power feed starts.

<sup>3</sup> Rotational speed maintained by the control system during full load operation. It is slightly greater than the nominal speed at which nominal power is first achieved. This ensures that, in the event of brief negative fluctuations of the wind speed, the rotational speed does not drop below the speed range required for achieving nominal power. With gusty winds, the rotational speed can briefly exceed the speed setpoint.

## 3 Wind energy converter design

### 3.1 Certified/target design requirements

The wind energy converter has been/will be certified for the following design requirements laid out in DIBt 2012 and IEC 61400-1:2019 (4th edition). These design requirements must be taken into consideration for the intended installation site of the wind energy converter.

**Tab. 3: Certified/target design requirements, tower-specific**

Parameter	E-175 EP5-ST-112-FB-C-01	E-175 EP5-HST-132-FB-C-01	E-175 EP5-HT-162-ES-C-01
IEC wind class (4th edition)	S	S	S
Turbulence category acc. to IEC (4th edition)	A	A	A
DIBt wind zone/terrain category	-	WZ S <sup>4</sup>	WZ 2/GK II
50-year extreme wind speed at hub height (10-minute mean) acc. to IEC (4th edition) in m/s	42.50	42.50	42.50
Corresponds to a load equivalent of approx. (3-second gust) in m/s	59.50	59.50	59.50
50-year extreme wind speed at hub height (10-minute mean) acc. to DIBt 2012 in m/s	-	42.50	42.50
Annual average wind speed at hub height acc. to IEC (4th edition) in m/s	7.00	7.20	7.80
Annual average wind speed at hub height acc. to DIBt 2012 in m/s	-	7.20	7.80
c values of extreme turbulence model	2	2	2
Form parameter of Weibull function k	2	2	2
Wind shear	0.1/0.2	0.2	0.2

<sup>4</sup> The wind speeds of wind zone S shown here cover the wind speeds of wind zone 2 terrain category I and II according to DIBt 2012 or DIN EN 1991-1-4/NA. According to DIBt 2012, the annual average wind speed at hub height in wind zones 1 and 2 must be set to the value of wind zone 3. Since the designated wind zone S does not cover the annual average wind speed of wind zone 3, a wind zone S is identified and it must be shown on a site-specific basis that the annual average is covered by the design value.

Tab. 4: Certified/target design requirements, general

Parameter	Value	
Turbulence intensity	Wind speed at hub height in m/s	Turbulence intensity in %
	2	56.80
	4	34.40
	6	26.93
	8	23.20
	10	20.96
	12	19.47
	14	18.40
	16	17.60
	18	16.98
	20	16.48
	22	16.07
	24	15.73
	26	15.45
Flow inclination	8°	
Normal temperature range	-10 °C to +40 °C	
Extreme temperature range	-20 °C to +50 °C	
Relative air humidity	≤ 95 %	
Maximum solar irradiance	1000 W/m <sup>2</sup>	
Standard air density	1.225 kg/m <sup>3</sup>	

The load calculations (operating and extreme loads) include a safety factor which corresponds to the load case group.

## 3.2 Other site requirements

Tab. 5: Other site requirements

Parameter	Value
Distance between wind energy converters on the wind farm <sup>5</sup>	≥ 5 x rotor diameter in main wind direction (Turbulence category A)
	≥ 3 x rotor diameter in less frequent wind directions (Turbulence category A)
Maximum elevation above sea level <sup>6</sup>	800 m
Survival temperature <sup>7</sup>	-40 °C
Site acc. to corrosion protection class	Steel tower, outside: C4 (acc. to DIN EN ISO 12944)
	All interior components not directly exposed to the weather: comparable to C3 'high' (acc. to DIN EN ISO 12944)

## 3.3 Application of modified design parameters

The site conditions specified in this document are general reference values. It is also possible to install and operate the wind energy converter at sites where conditions are different. However, this requires additional project-specific assessments.

The wind energy converter is equipped with an internal closed-loop control system consisting of various monitoring sensors and mechanisms (e.g. sensors for temperature, vibrations, oscillations and loads). If the wind energy converter closed-loop control system recognises that the conditions at the site are outside the acceptable range, the main control system of the wind energy converter automatically takes the appropriate protective measures (e.g. transition to a reduced-power operating mode, or stopping operation).

<sup>5</sup> These specifications are to be considered general reference values. The influence of the wake effect must be assessed for each individual project.

<sup>6</sup> Sites at higher elevations are generally also feasible; however, a project-specific assessment is required.

<sup>7</sup> For situations with limited stress.

## 4 Configurations for extreme temperatures

### 4.1 Cold Climate option

For sites where temperatures drop below -20 °C on more than 9 days per year on average, ENERCON offers wind energy converters with Cold Climate option.

For further information on the Cold Climate option, refer to the ENERCON document D0160496 'Technische Beschreibung Option Cold Climate' (Technical description of Cold Climate option).
